

RMB Windows Extender V1_2_1

=====
*** **If you need help** ***

info@bourbaky.com

=====
*** **Documentation** ***

The full documentation and samples are in the Winzip self-extractor file :

"RmbWextDocsVx_y.exe"

that can be downloaded from www.bourbaky.com

For a brief description of RmbWinExtender see "Description.PDF"

To get started, have a look at "GettingStarted.PDF"

=====
*** **Desinstallation** ***

You must use the Remove button from the Control Panel.

After that you can remove any remaining files in the directory where you have installed RmbWinExtender

=====
*** **Running Simple Example** ***

- 1) Launch SimpleServer.prg (it's a "stored" form of RmbWin program, the .prg extension would launch HP/HT Basic for Windows and start execution).
When it is running, SimpleServer will start listening automatically and wait for a client connection.
- 2) Launch SimpleClient.exe
- 3) Establish a connection with [Connect] push button of "SimpleClient"
- 4) Once connected, you can send message to server (echoed by default) and observe message coming from server.
- 5) You may Start/Stop the server using RmbWin function keys, as well as Connect/Disconnect the client with push buttons.
- 6) By default, SimpleClient is configured to deal with SimpleServer on same machine (HostName 127.0.0.1) through port number 1800. As SimpleServer.prg offers connection on port number 1800, all that would run with default configuration.

=====
*** **Installed files** ***

All files are installed in the directory you choosed for RmbWinExtender, excepted for :

MSSTKPRP.DLL,TABCTL32.OCX,MSCOMCTL.OCX, MSWINSCK.OCX

that are part of Visual Studio 6.0 redistribuable files and that are installed in the Windows System Directory as sharable files
